

FOUR OF A KIND MINI SUCCULENTS *Species*

may vary

Assorted mini succulents are planted in modern black and white ceramic cubes. Place in bright indirect light or a space that receives a few hours of morning sun. Check the soil for dampness once a week. If dry, add about a quarter of a cup of water, keeping in mind that any excess will build up in the bottom and should be avoided. Water should be applied to the soil, not to the plant itself.

GEOGRAPHIC ORIGIN:

Africa & the Americas

GREAT FOR: Bright Sunlight

FEATURES:

Low Maintenance

GROWTH RATE: Slow

LIGHT

Place in bright indirect light or a space that receives a few hours of morning sun. In hot summers, more shade may be necessary.

WATER

Check the soil for dampness once every week. If dry, add about a quarter cup of water. Any excess will build up in the bottom and should be avoided.

DIFFICULTY

Easy! Just check the soil for dryness weekly and avoid too much direct sunlight.

TEMPERATURE

Normal household temperatures 60-80°F are best.

FERTILIZER

Feed with a mild cactus fertilizer about once a month during the growing season. Do not fertilize in winter.

SOIL

When repotting, use a well-draining Cacti/Succulent Potting Mix for best results.

PRUNING & PROPAGATION

Prune damaged leaves by pulling from the stem. To propagate, plant stem or leaf cuttings in soil.

PET FRIENDLY?

Sorry! While some succulents are non-toxic if consumed by pets, others can be mildly toxic.
